ABOUT US

Alliance Environmental Group, Inc., (AEG) provides professional services in the areas of environmental studies, permitting and design. The professionals at AEG have over 50 years of combined experience in areas ranging from Phase I Site Assessments to designing remediation systems for the cleanup of contamination.

AEG utilizes the most modern technologies on its projects to better meet the needs of our clients. And our reputation amongst the regulators and the regulated community is second to none.

- Richard C. Hittinger •
President

20+ Years Experience

- Brownfields Projects -Remediation Design
- Auditing & Compliance -Air Permitting
- Environmental Chemistry

- Michael F. Geisser, PE, RLS, LSP •
Principal Engineer

20+ Years Experience

- MCP Projects -Site Remediation
- Marine Design & Permitting
- Geotechnical Design

Woonsocket, RI Mill Site Investigation and Remediation

AEG was contracted to provide investigation and remediation of a #6 fuel oil spill below a mill building along the Blackstone River in Woonsocket, RI. When the extents of the release were identified, a RIDEM approved remediation system was installed in 2007 to remove oil from the groundwater. During the past 15 months of operation, over 4,600 gallons of oil has been recovered and has been used to heat the building, thus reducing waste disposal costs.

Salem, MA Immediate Response Actions

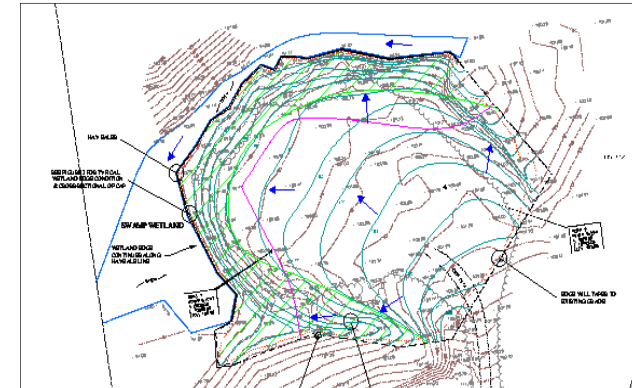

During construction at the Carlton School in Salem, Massachusetts a black, oily waste was encountered. AEG identified contamination at the Site and reported the Site to the MADEP on behalf of the City. AEG implemented an Immediate Response Action Plan and a Health and Safety Plan and oversaw the excavation and disposal of contaminated soil. AEG monitored Site activities and worked to eliminate environmental hazards. AEG closed the Site with an RAO in accordance with the Massachusetts Contingency Plan.

Fiskeville, RI Industrial Landfill Closure

AEG was hired to close an old industrial landfill surrounded by wetlands. Following a subsurface investigation and delineation of the landfill boundaries, a RIDEM- approved closure plan that included capping of the landfill with a geotextile fabric and clean fill was prepared. AEG directed all of the permitting and capping operations. After the cap was placed, the entire cap was hydroseeded with a conservation mix and mulch. In less than one month, AEG was able to delineate the landfill boundaries, complete grading, install hay bails and geotextile fabric, place cap soils and hydroseed the four-acre site. RIDEM approved the closure. The area is currently covered with grass.
