Viral Decontamination Janitorial Services

Our Disinfection Services

To prevent and stop the spread of COVID-19, the following Alliance Environmental Group services are recommended for all surfaces.

- **Surface Wiping:** Process involves sanitizing and wiping down all solid surfaces
- **Disinfectant Fogging:** The application of fine droplets to the atmosphere
- **Electrostatic Spraying Mist:** Produces fine droplets that are applied through the air to coat surfaces

How it Works

Our disinfectant fogging and electrostatic spraying mist cover all surfaces, ceilings, walls, etc. Both use a hospital-grade disinfectant called hypochlorous acid (HOCl). In addition, the electrostatic technology creates a treatment barrier that resists pathogens for extended periods of time.

More about HOCl:

- EPA-registered to be used on all surfaces for the destruction of over 130 organisms, including the human Coronavirus
- At the appropriate concentration, HOCl has a 1-minute kill claim for Coronavirus
- Safe for humans and animals, when properly applied

The whole process generally takes less than a day and helps companies safely reopen the next business day.

Shared Surfaces

COVID-19 and other viruses can spread through contact with shared or frequently-used surfaces, also known as direct surfaces. These include:

- Handles and knobs
- Desks and table tops
- Kitchen and bathroom fixtures
- Computers and associated accessories
- Control panels
- Arms of chairs and sofas

Indirect surfaces that don't have as much contact, such as shelves, walls, floors, curtains, and interior spaces of drawers and cabinets, are less of a concern for the spread of COVID-19. However, they can be added to the treatment routine.
